

▶ Polycom® Touch Control

Telepresence at Your Fingertips

The intuitive solution for accelerating Unified Communications (UC) and video collaboration throughout your organization .

The Polycom® Touch Control graphical interface solution is a highly-intuitive touch screen device that enables users to quickly initiate video conferences, free from complicated interfaces or technical support. By expanding user adoption of collaboration and allowing participants to focus on their meeting, the Polycom Touch Control solution accelerates your return on investment in telepresence and video solutions while making your organization more productive and efficient.

Conference with Confidence

The Polycom Touch Control interface is ideal for enterprises, educational institutions, healthcare organizations, and any other group requiring faster and more efficient real-time collaboration. Featuring a high resolution display that provides simplified navigation and menu selection, the Polycom Touch Control solution allows users to control all aspects of their conference experience, including finding colleagues, placing calls and sharing content.

Users can easily connect to one another using a shared address book, on-screen keypad, and calendar entry. For quick access to room information, the Polycom Touch Control interface also integrates with Microsoft® Exchange software to provide complete location detail. During a meeting, on-screen controls allow users to adjust near- or far-side cameras (pan, tilt, zoom), select preset camera locations, adjust volume, mute, and more.

The Polycom Touch Control solution also offers multiple options for sharing content. An integrated USB port automatically reads any Microsoft® Office-formatted file directly from an inserted flash drive, allowing users to easily view and share content. A second USB port dedicated to PC connectivity automatically runs Polycom People+Content IP™ content-sharing technology.

Easy to Use, Deploy, and Manage

The Polycom Touch Control device leverages Power Over Ethernet (POE) for clutter-free connectivity. Individual Polycom Touch Control devices can be easily paired and dedicated to any network-connected Polycom HDX® room telepresence system, and can be fully managed via the Polycom Converged Management Application™ (CMA™) 5000 and 4000 solutions.

Polycom Touch Control devices can be deployed in an identical configuration to provide users with a consistent experience regardless of environment, or devices can be individually tailored to unique workflows.

Benefits

- ▶ Reduced video conferencing learning curve and increased user adoption through a highly intuitive interface
- ▶ Customizable for organizational applications, workflows and user needs
- ▶ Improved user experiences through one-touch control of environmental elements like monitors, projectors, and other IR-controlled devices
- ▶ Improved collaboration through seamless integration with Polycom HDX® Series room telepresence, Polycom RSS streaming solutions and Polycom SoundStructure® systems

► Polycom Touch Control Specifications

Package Includes

- Polycom Touch Control, stand and RJ45 (LAN) cable
- POE adaptor

Usability

- Touch control on 7-inch screen
- Tap and touch control to access call controls and administrative menus

Technology

- Flexible Operating System
- Capacitive touch screen
- IR control for third-party devices
- Direct API command through network

Electrical

- Power Over Ethernet (POE) required

Physical Characteristics

- Polycom Touch Control with removable stand
- 7.25" (W) x 5.5" (D) x 1 – 1.75" (H)

Warranty

- One-year return to factory parts and labor
- 90-day software warranty

Technical Documentation

- Award-winning documentation for setting up, maintaining, and using the system
- Available at www.polycom.com/videodocumentation

Development Information
